Factors affecting the fate and transport of glyphosate and  
AMPA into surface waters of agricultural watersheds in the  
United States and Europe. Due to the loss of feedback control  
of the shikimate pathway by tyrosine that regulates the  
activity of 3-deoxy- D -aravino-heptulosonatephosphate  
synthase Crowley, the herbicide glyphosate led to an  
unregulated flux of carbon into the shikimate pathway Siehl,  
This indicates that glyphosate can affect other plant-physiological processes  
of total carotenoids and chlorophylls a and b of leaf extracts  
in different solvents.
