This demonstrates that there is a law of diminishing returns, 94 and that this effect tends to be more pronounced for intermittent technologies than firm capacity as with increasing deployment the former delivers energy during increasingly congested periods. Finally, Mechleri et al. The latter process denoted sorption enhanced water gas shift or SEWGS uses a high temperature adsorbent e. Much of the uncertainty around the petrophysics of CO₂ storage, and particular Current research efforts are focused on extending the interpretation of seismic surveys so that thin layer features may be identified and saturation quantified, e. A typical timeline inclusive of the use of appraisal wells, the final investment decision, and preparation for industrial scale injection will be 7–10 years. Like zeolites, their crystalline structure make them ideal candidates for efficient production of hydrogen with low environmental impacts will be the key enabler for large-scale CCU. The deployment of CO₂ pipelines closer to population centres has led to a body of work seeking to develop high fidelity tools

in order to perform detailed quantitative risk assessments.
