In other words, the state is. Ecological approaches to cognition and action in sport and exercise: Emergent patterns of interaction have been studied using different representations of the interactions between the different individuals.

Importantly, this understanding of what a sport team is implies a new understanding. Based on the conceptualization of Ingold we briefly explain this idea. The social constitution of perceiver-environment reciprocity. Understanding social motor coordination. Team centers can represent, in a single variable, the relative positioning of both teams in forward-backward and side-to-side movement displacements. Every team sport presents its own set of interacting constraints that helps define competitive functioning.
